

CCVStore

The B2B app store for Android-based payment solutions.

With the CCVStore, we are arming ourselves for the digital future. Apps also offer numerous and diverse application possibilities in payment - paired with Android POS terminals, this creates great use cases for retailers and service providers.

The CCVStore is the browser-based and easy-to-use platform for the administration and management of apps and associated android-based terminals, both attended and unattended.

The CCVStore in Germany is hosted and operated by CCV.

Your benefits thanks to easier provision of additional services:

- 

The CCVStore provides access to a variety of apps for CCV devices from independent providers
- 

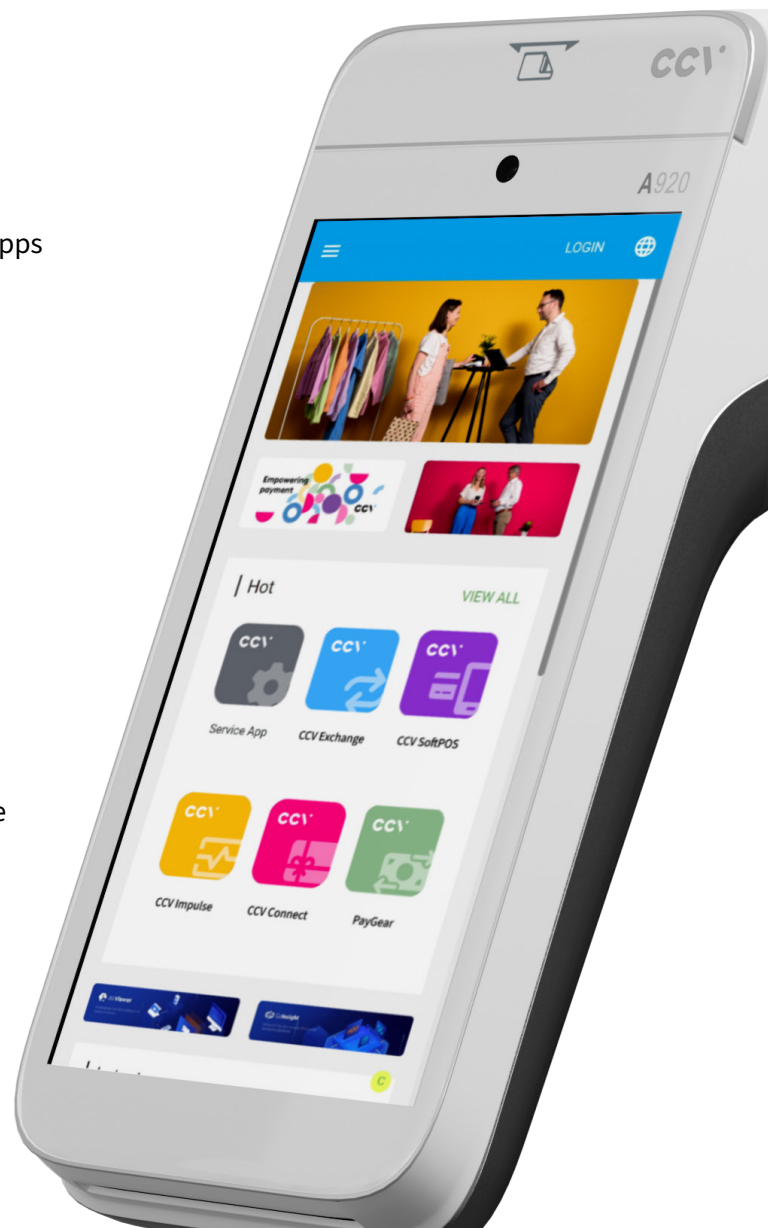

CCV guarantees maximum security through strict checks of all uploaded apps
- 

Creation of clients within the CCVStore environment
- 

Resellers can thus offer their additional services offer more easily
- 

Direct access to all Android terminals e.g. via AirViewer for maintenance and service

The CCVStore can do much more. For a detailed description, please refer to the back page.

Basic description

- The CCVStore is used for remote management of apps and CCV Android terminals via a backoffice.
- Partners are given access to the Admin Store, where only their terminals and agreed apps are displayed.
- CCV terminals are registered automatically or manually via an interface in the CCVStore.
- Access to the Admin Store is browser-based with the master user and password provided.
- The CCVStore is hosted in Germany.

Terminal information

- The back office shows status, basic information, installed apps, peripheral status and enables Logcat access, among other things.
- Configurable dashboard with statistics and widgets.
- Direct access to terminals optionally via "AirViewer" possible.

Multi-client capability

- Partners can create separate sub-areas for e.g. create a dealer.
- Allocation of access and assignment of rights to partners and resellers possible.

App and software management

(Remote)

- Apps can be pushed remotely to terminals, individually or in groups.
- The time and conditions (e.g. WiFi connection required) for the push can be defined.
- App updates can also be distributed remotely become.
- The same applies to the operating system and payment engine.

Use of apps

- Commercial agreements with app partners run via CCV as standard.
- CCV provides some basic apps such as the app2pay+.
- Many apps are already available in the store on demand available.
- Further separate modules optionally available (e.g. "GoInsight" as an additional reporting module).
